

**A
PROJECT REPORT
ON**

“ SkinLab ”

**Submitted in partial fulfilment of the requirement for
Bachelor of Computer Application (B.C.A)
(Semester-VI)**

Sant Gadge Baba Amravati University, Amravati.

Submitted By

Ms. Pournima A. Madankar

Ms. Jagruti G. Khobragade

Under Guidance of

“Prof. Mr. Pravin Dhande “

Department of BCA

Smt. Maherbanu College of Science and Commerce, Akola

(2023-2024)

Shri Akola Gujarati Samaj's

SMT. MAHERBANU COLLEGE OF SCIENCE & COMMERCE

Creating Knowledge Society . . .

Recognised by Govt. of Maharashtra / Affiliated to SGB Amravati University

CERTIFICATE

This is to certify that Project Work titled “**SkinLab**” is a bonafide work conducted by **Ms. Pournima A. Madankar & Ms. Jagruti G. Khobragade** a student of Bachelor of Computer Application (BCA-III Semester-VI) under our guidance.

Dr. Smita Shingrup

Principal

Prof. Pravin Dhande

Faculty Guide

Prof. Avani Kulkarni

H.O.D.

ACKNOWLEDGEMENT

*It is our privilege to express our sincerest regards to our project coordinator **Prof. Pravin Dhande**, for their valuable inputs, guidance, encouragement, wholehearted cooperation and constructive criticism throughout the duration of our project.*

*We deeply express our sincere thanks to our Principal **Dr. Smita Shingrup** for encouraging and allowing us to present the project on the topic “**SkinLab**” at our department premises for the partial fulfilment of the requirements leading to the award of Bachelor of Computer Application (BCA) degree.*

We take this opportunity to thank all our lecturers who have directly or indirectly helped our project. We pay our respects and love to our parents and all other family members and friends for their love and encouragement throughout our career. Last but not the least we express our thanks to our friends for their cooperation and support.

Thank You

DECLARATION

I hereby declare that this project titled **“SkinLab.com”** Submitted to Sant Gadge Baba Amravati University, for the award of the degree of **BACHELOR OF COMPUTER APPLICATION**, is a record of original work done by us under the supervision and guidance of **Prof. Pravin Dhande** and the project has not formed the basis for the award of any degree/diploma candidate of university.

PREFACE

In the current world of computer science, each and every field whether it is financial, industrial, educational, technological, research, private business or others all are using computer for to get real power of the current technology.

It not only saves man power but also the human most costly resource. Time as the company or business growth.

The requirement of data manipulation also grows everyone wishes together with current world.

In this most dynamic world, I also remain dynamic to remain alive against my business in every field proves case of operation flexibility real time response and facility of storing big database of respective as per requirement.

1.INTRODUCTION

1.1 Introduction

- The project is about **“Customizable SkinCare Products”** where user have a choice of selecting what is best for themselves.
- In an Era where individually resigns supreme, We recognise that one-size-fits all solution simply don't cut it. That's why we are thrilled to introduce our innovative project focused on customizable screen skin care products.
- With our project you will have the opportunity to tailor your skincare routine to match your skin type, concerns and preferences perfectly.
- Our mission is to empower you to take control of your skincare regimen by offering customizable solutions that address your specific concerns, preferences and goals.

1.2 Project Purpose

- Introduce **Herbal Beauty Products.**
- Aim is to Create a User-friendly and Informative digital space where users can Discover, Learn about, and purchase a curated selection of Herbal Skincare, Haircare, and Wellness products.
- Customers can order a demo product to know if it suits them or not.
- Online payment methods are available such as UPI, Net Banking, Credit/Debit Cards .etc.

2. SYSTEM ANALYSIS

2.1 The Existing System

This website is a purely web-based application and it is compatible in mobile and desktop also. Website is about customizable beauty products where it takes input from the customer about their skin type allergies ingredients hated etc. With the help of short questions customers have to answer that questions and it will find suitable skin products for them the aim is to create a transformative experience that combines the timeless wisdom of **Herbal Beauty** with the convenience of modern technology.

2.2 Requirement of the New System

It is computerised software system the system stored the data with the help of the software and is filled with easy in the computer database. The system makes process of order of the product faster and it reduces the time and manpower too. The retrieval of information of any product is with just a click. It is easy to operate and there is attractive user interface. Management for ordering of beauty products billing process and updating of the product details is done with the help of single data entry in the centralised database and delivery of the product from customer requirement shop and products.

3. SYStEM CONFIGURATION

3.1 Software Configuration

1. Operating Environment

- ❖ Sublime text
- ❖ XAMPP Control Panel
- ❖ Operating System : Windows 10/11
- ❖ Browser : Microsoft Edge / Chrome

2. Development Environment

- ❖ Frontend : HTML, CSS, JS, BootStrap
- ❖ Backend : PHP, MySQL

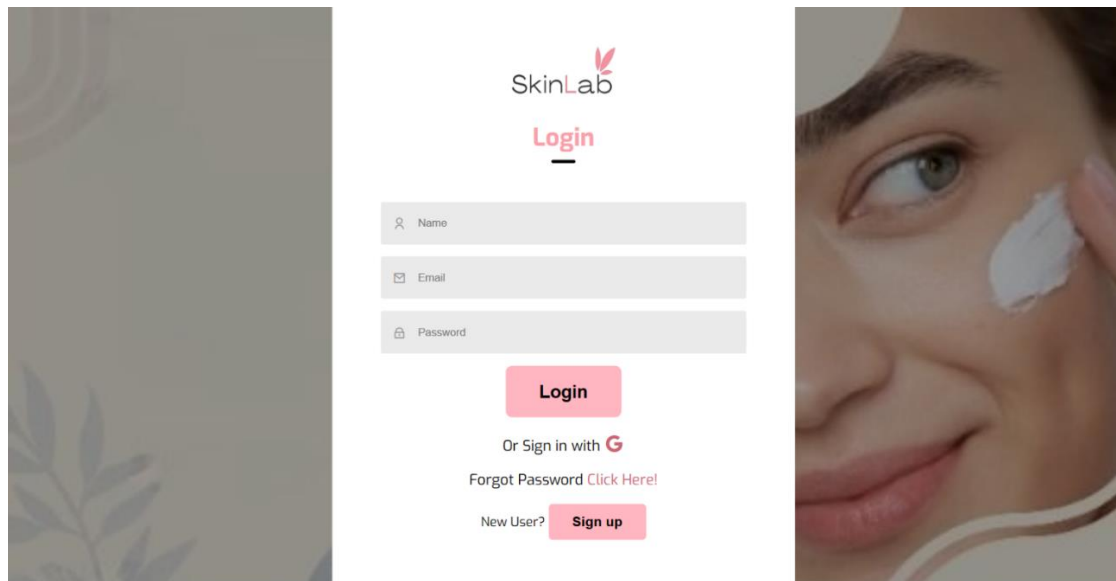

3.2 Hardware Configuration

- ❖ RAM : 256MB
- ❖ Processor : Any device with internet Connection

4. SYSTEM DESIGN

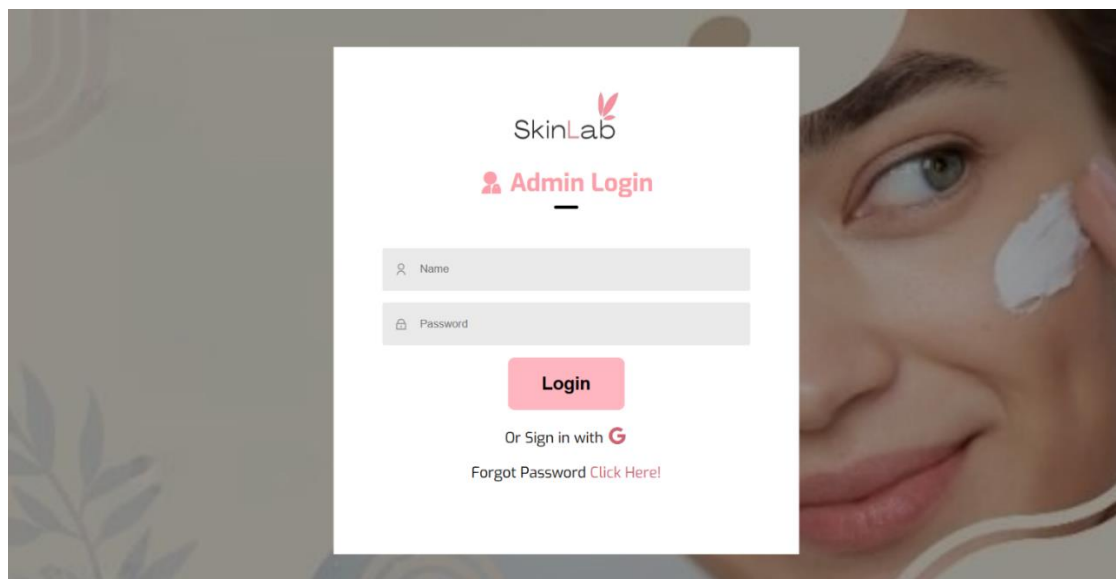

4.1 User and Admin Login

User Login:

The image shows a user login form for SkinLab. The form is centered on a white background with a subtle floral pattern on the left and a close-up of a woman's face on the right. The form includes the SkinLab logo at the top, followed by the word "Login" in red. Below this are three input fields: "Name" (with a person icon), "Email" (with an envelope icon), and "Password" (with a lock icon). A red "Login" button is positioned below the fields. Underneath the button, there is a link "Or Sign in with G" (where G is a red logo), a link "Forgot Password Click Here!", and a "New User?" label next to a red "Sign up" button.

Admin Login:

The image shows an admin login form for SkinLab. The form is centered on a white background with a subtle floral pattern on the left and a close-up of a woman's face on the right. The form includes the SkinLab logo at the top, followed by the text "Admin Login" in red with a red person icon. Below this are two input fields: "Name" (with a person icon) and "Password" (with a lock icon). A red "Login" button is positioned below the fields. Underneath the button, there is a link "Or Sign in with G" (where G is a red logo), a link "Forgot Password Click Here!", and a "New User?" label next to a red "Sign up" button.

SkinLab's Skin Concerns:

5. SYSTEM IMPLEMENTATION AND TESTING

5.1 System implementation

System implementation is a practise of creating or modifying a system to create a new process or replacing an exiting process technology integration is the practise of integrating this is multiple system activities to interact and generate information efficiently in both cases the system development lifetime for Held is heavily interred in these practises.

5.2 System Testing :

System Testing of software and hardware is a testing conducted on a complete, integrated system to evaluate the systems compliances will it specified requirement. System testing falls within the scope of **Black box** testing and as such should require no knowledge of the inner design of the code or logic.

As a rule, system testing takes, as its input, all of the “integrated” software components that have successfully passed integration testing and also the software system itself indicated with any applicable hardware system. The purpose of integrated testing is to detect any inconsistencies between the software units that are integrated together (called assemblages) or between any of the assemblages and the hardware. System testing is more limited type of testing it seeks to detect both within the “inter-assemblages” and also within the system as a whole.

There are two major types of testing they are :

1. **Black box testing**
2. **White box testing**

Black Box Testing

- Black Box testing is a testing technique that ignores the internal mechanism of the system and focuses on the output generated against any input and execution of the system.
- It is also called functional Testing.
- In Black box testing there is only concentrate on input and output.
- Black box test design is usually described as focussing on testing functional requirements.
- Technical background is not the necessity of black box test. Black box testing is often used for validation

White Box Testing

- White box testing is a testing technique that takes into account the internal mechanism of our system.
- It is also called structural testing and glass box testing.
- White box testing deals with the internal structure and the internal working rather than only functionality.
- White box testing, programming background is merged because this helps in creating test cases for white box testing.
White box testing is applied for unit testing and sometimes in it is also useful assistant testing. White box test is often used for validation.

6. APPENDIX

The data flow diagram is a graphical tool used to describe and analyse moment of data through a system. These are the central tool and the basic form which the other components are developed. The transformation of the data from input to output, through processed, may be described logically and independently of physical components associated with the system. These are known as the logical data flow diagram.

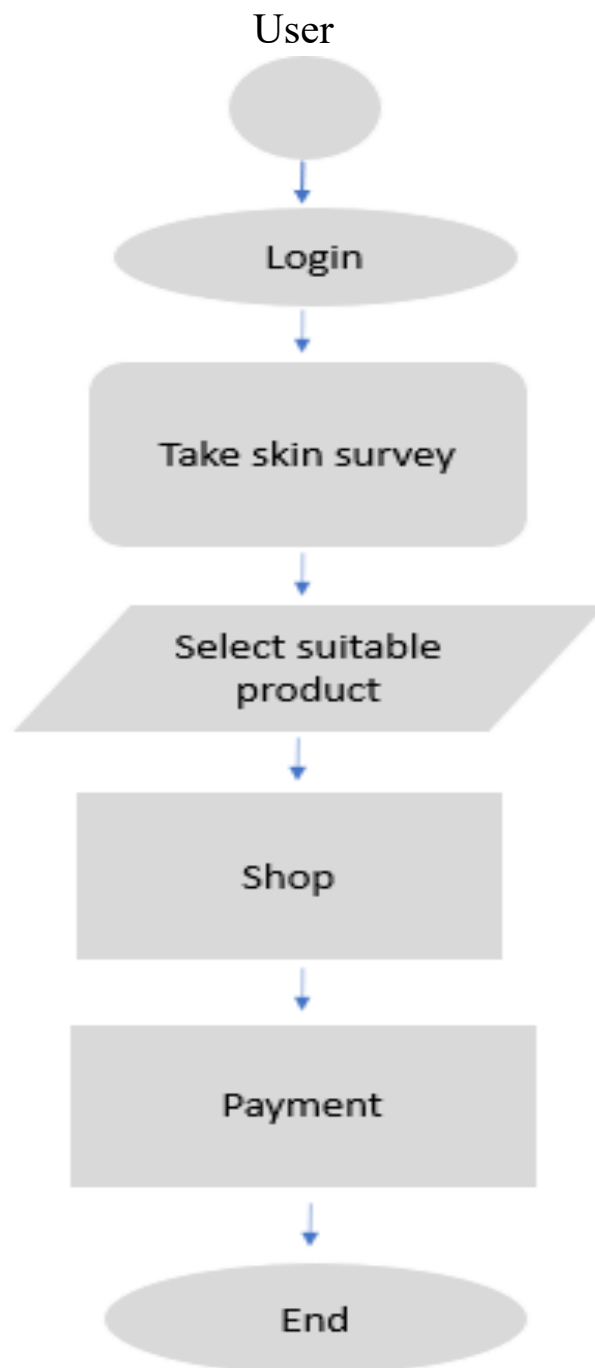

A DFD is also known as “Bubble chart” as the purpose of clarify system requirements and identifying the major transformation that will become programmes on system design so, it is the starting point of the date design to the lowest level of details. A DFD consists of series of bubbles joined by data flows in the system.

6.1 DFD for the customer :

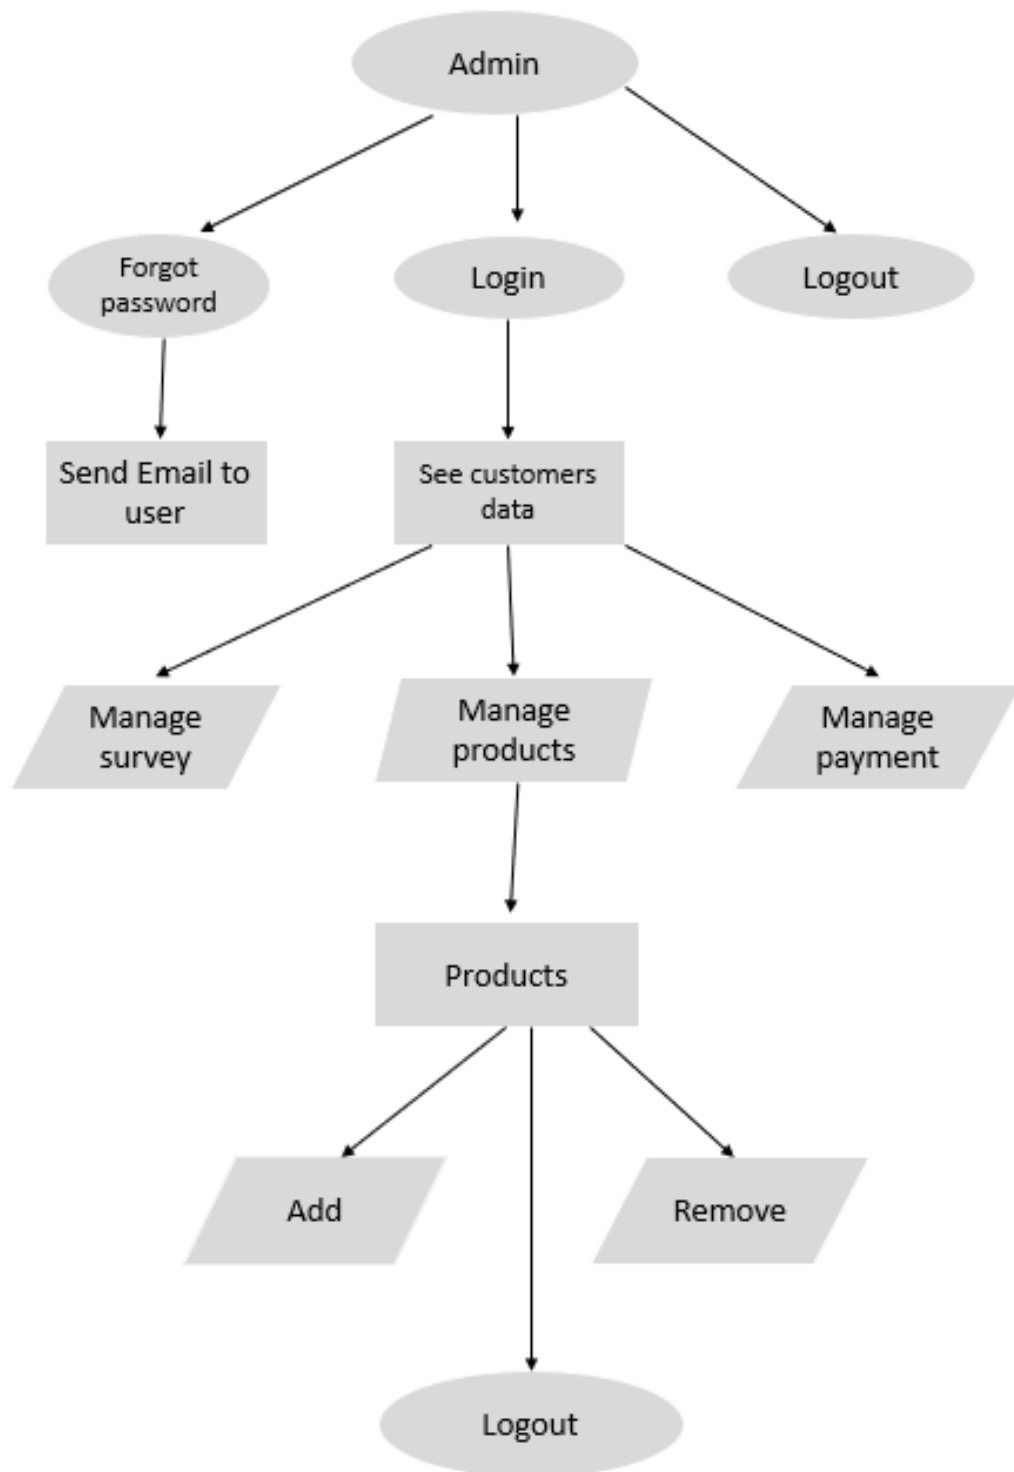

1.1 Context Level DFD

1.2 First level DFD

1.3 Second Level DFD

7. FUTURE SCOPE AND FURTHER ENHANCEMENTS

The future scope and potential enhancements of this Customizable Beauty Product Website Project are exciting and expansive, offering opportunities to further engage users and expand the offerings.

Personalized beauty solutions

Here are some potential directions for future development :

- **Personalized Recommendations** : Implementation of AI driven recommendation system for quick response.
- **Interactive Beauty Tools** : Introduction of virtual try on for makeup products.
- **Community Platform** : Creation of dedicated community section where users can share their experiences, beauty journey and tips.
- **Subscription Services** : Extra discount for regular customers and referrals.
- **Educational Workshops** : Workshops or webinars conducted by herbalists, skincare experts for depth knowledge of skin care.
- **Global Partnerships** : Collaboration with more beauty products organizations.
- **Green Initiatives** : Recycling Programs and partnering with eco-conscious organizations.
- **Collaborative Content** : Partnership with beauty influencers, experts and wellness enthusiasts.
- **Advanced Skincare Analysis** : Integration of Advanced skin care tools.

8. CONCLUSION

In the end, the project to create a website for customizable beauty products is all about making customers feel amazing. With the ability to choose and create individuals own beauty items, by putting the control in their hands.

It's like having their own beauty lab where they are the scientist and the artist.

By the use of all organic and herbal beauty products that has almost no side effects on skin will definitely create a beautiful and natural beauty.
